DREAM SEMINAR

Seminar Year I

Instructors: Alfred Margulies, M.D. Alan Pollack, M.D.

“Don’t open that door,” she said. “The hallways are full of difficult dreams.” And I asked her: “How do you know?” And she said to me, “Because I was there a moment ago, and I had to come back when I discovered I was sleeping on my heart.”

– Gabriel Garcia Marquez

Welcome! This seminar will explore the ways in which our understanding of dreams shapes our clinical experiences of them. We’ll look at various models of dream formation and interpretation, from The Interpretation of Dreams, to contemporary views of the dream as part of analytic field. We have set a course through a vast terrain of dream theory guided by a single practical aim: to help prepare you to work with dreams in the clinical setting.

The Interpretation of Dreams is not only the fundamental book about dream interpretation, it is the foundation for all of psychoanalysis. You have already been introduced to it, and we will recap its central implications for working with dreams. If time permitted, we would read the entire book together. Since we don’t have the leisure to do that, we’ll have to content ourselves with recommending that you read the entire book through on your own.

Each week, we will provide a brief background for the readings, and then, we hope you will raise questions or relate experiences that can clarify or elucidate the readings. We’ll also have a clinical presentation each week. We hope that this combination of theoretical and clinical discussion will create animated conversations that will inform our dream work.
Class I: April 14  Telling Dreams, Hearing Dreams.

What good are dreams? What makes them they valuable in treatment, in life, in theory making? How does our theory inform our clinical approaches to dreams?

Readings:

Lippmann, Paul (2000) Why use dreams in psychoanalysis and psychotherapy?, Chapter 14, In Nocturnes: On Listening to Dreams. The Analytic Press, NY; pp 183-201. [Download from the Reading folder or request from library@bpsi.org]

Learning Objective: At the completion of this session, the candidate will be able to discuss two major trends from the historical evolution of theories of dreams and their clinical use.

Class II: April 21  Freud’s Theories

Now, about the appetites, here is the point I want to make plain. Among the unnecessary pleasures and desires, some, I should say, are unlawful. Probably they are innate in everyone.

What kind of desires do you mean?

Those which bestir themselves in dreams, when the gentler part of the soul slumbers and the control of reason is withdrawn; then the wild beast in us, full-fed with meat or drink, becomes rampant and shakes off sleep to go in quest of what will gratify its own instincts.

Plato The Republic IX 571 c-d

Readings:

Freud, S. (1911) The Handling of Dream Interpretation in Psychoanalysis. S.E. 12:89-96. PEP Web Link

Freud, S. (1925) Some Additional Notes on Dream Interpretation as a Whole, 19:123-138 PEP Web Link

Explanatory Note: We know that you read Irma in your Freud I course. The Irma dream has been called “Navel of psychoanalysis”, or “The dream from which psychoanalysis proceeds” – because of its historical importance in the development of Freud’s thinking. As the most important dream in psychoanalysis, it rewards repeat consideration. But we don’t want to simply repeat your Freud I discussion. Thus, after refamiliarizing ourselves with the Irma dream, we will turn to the rich subsequent literature for a radically different understanding than the interpretation given by Freud. We will also take up some brief general comments by Freud on dream interpretation.

Learning Objective: At the completion of the session, the candidate will be able to characterize Freud's understanding of the function of dreams and his process of uncovering the latent meaning as it is both represented and disguised in the manifest content.

Class III: April 28  Defense Analysis and Dream Technique

Freud famously viewed dreams as the royal road to the unconscious. Today we might call it a superhighway. Some dreams do make the route appear straight and clear, tempting us to step on the accelerator and race ahead with glee. But as Freud reminded us in the papers for last week, dream interpretation is subject to all the considerations applicable to any other part of analytic work.

Readings:

Learning Objective: At the completion of the session, the candidate will be able to describe two approaches to the analysis of defenses in dreams.

Class IV: May 5  Is Wish Fulfillment a Useful Idea Even When Dreams Are Painful?

Owen Renik illustrates how a thorough-going commitment to classical dream theory can yield insights even into dreams that seem most inhospitable to the idea of infantile wish fulfillment.

Reading:

Learning Objective: At the completion of this session, the candidate will be able to articulate and apply Owen Renik’s work with Superego Dreams.

Class V. May 12  Dream Interpretation and Brain Science

Science has changed our understanding of sleep and dreaming since Freud’s day, rendering some aspects of his theory no longer tenable. We will summarize relevant scientific findings, then explore a revised psychoanalytic dream theory that retains the clinical essence of Freud while being consistent with science.

Readings:

The first of these articles is a concise critique of Freud’s theory, followed by a summary of relevant dream lab research. The second reports a single study. You may skip the introductory material in the second paper and start at “The Present Study”, p. 535, as the introductory material is included in the first paper.

Ray Greenberg is both a pioneer dream researcher, and a BPSI analyst who taught Dreams at BPSI for many years. His work exemplifies the melding of rigorous science with sophisticated psychoanalytic thinking.

Learning Objective: At the completion of this session, the candidate will be able to describe researched based dream theory.

Class VI: May 19  On talking-as-dreaming

How can psychoanalytic work, including the analyst’s reveries, help initiate psychic functioning and transform the patient’s experience into waking thoughts? Thomas Ogden’s lyrical work gives us a look at his process.

Readings:

Learning Objectives: At the completion of this session, candidates will be able to explain Ogden’s idea of the relationship of analytic work to dreaming.

Class VII: May 26  The Dream as Lived Experience
Philip Bromberg endeavors to bring the dream alive in the analytic session, an experience being lived rather than a dream being reported and studied. In this clinical paper we have a window into his ideas about self-states and dreaming.

**Reading:**

[PEP Web Link](#)

*Learning Objective:* At the conclusion of this session, the candidate will be able to discuss a clinical application of Bromberg’s theory through dreamwork.

**Class VIII: June 2  Sensory Experience and Empathic Resonance**

Al Margulies carefully explores the phenomenology of lived dream experience. He demonstrates, in particular, how attention to the sensory/affective dimensions of the dream deepens resonance between the patient’s “inscape” and the analyst’s.

**Readings:**

  Chapter 2: The Sensory Dimensions: On Listening to a Dream p.21-34  
  [Download from the Reading folder or request from library@bpsi.org](#)

  Chapter 4: Active Empathy: The Dormant Inscape p.47-58  
  [Download from the Reading folder or request from library@bpsi.org](#)

*Learning Objectives:* At the completion of this session, candidates will be able to explain the way attention to sensory/affective elements in dreams facilitates the analyst’s resonance with the patient’s experience, thereby deepening clinical understanding.
